Explore our EDUCATIONAL WEBAPP!

www.en.app.id-teachers.eu

This webApp is aimed at Vocational Education and Training practitioners and anyone interested in:

- Conceiving, designing and testing interactive micro-learning activities focused on students.
- Developing more personalised and effective online training experiences.

In other words, it is not a website offering general courses or a repository of materials, but rather a tool that enables education professionals or anyone interested in online learning to create and manage micro-learning activities by themselves.

You can register there and then to start using it as a practical complement to instructional design.

What you can do there

1. Create online micro-learning activities designed to be short, interactive, and focused on students' needs.
2. Set up student profiles and group them into specific classes or segments.
3. Provide personalised access codes for your students.
4. Monitor the progress and results of students using these activities.

STEP-BY-STEP GUIDE: GO FOR IT!

1. Register as a teacher/designer
Create your account.
From your dashboard, you will have access to:
- Activity creation
- Group management
- Student tracking

2. Creating a micro-activity
You can design short activities such as:
- Interactive questions
- Decision scenarios
- Mini-challenges
- Multimedia activities
- Step-by-step sequences

Each activity is built following the logic of brief learning objectives, short interaction and immediate feedback.

3. Creating student groups
You can:
- Create classes or cohorts
- Generate access codes.
- Invite participants without the an institutional email address.

This is ideal for:
- Pilot workshops
- Boot camps
- Training of trainers
- Testing of materials

4. Assigning activities
You associate activities with each group.

Students access them using the code and complete the micro-activities on the web or mobile.

5. Monitoring and analytics
From your dashboard, you can see:
- Who completed each activity
- Response results
- Time spent
- Overall progress of the group

This allows you to evaluate the effectiveness of the design, adjust activities and detect learning difficulties.
